BATTERY STATUS INDICATOR

If the M134 is operating solely on battery power, the battery must be monitored at all times. The possibility of low battery power during combat operations is unacceptable. With this in mind, Dillon Aero designed the battery status indicator. Available for direct installation on the battery cable or as a plug-in style tester, it displays battery voltage, amperage, and percentage of battery charge available with the push of a button.

FEATURES

- Numeric display and light bars offer simple visual inspection of remaining charge
- Draws power from the battery being tested, and thus immediately provides an accurate reading
- Automatic Sleep mode saves energy after 10 seconds

Battery tester shown with a 10 amp hour battery
