

DILLON **AERO**
503D
THE ALL NEW .50 CALIBER GATLING GUN

503D

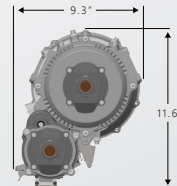

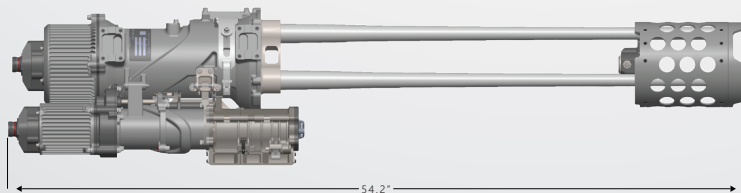

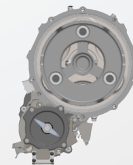

Lighter. Faster. Smarter.

Dillon Aero is in the final stages of developing a new .50 caliber Gatling gun, known as the 503D. This gun system will be lighter, faster, and smarter than existing .50cal machine guns, firing up to 1,500 shots per minute with the ability to adjust the precise firing rate based on platform integration to optimize mission performance. The 503D's design includes integrated immunity to internal component damage from ammunition feed jams.

The technology used within the gun system provides operators detailed information on weapon operations, maintenance data for possible failure prevention, and increased safety.

FEATURES

- Chambered in NATO .50 BMG (12.7×99mm NATO)
- Firing rate of up to 1,500 rounds per minute (25 rounds per second)
- Gun weighs 91 lbs (41 kg)
- Designed for component damage immunity
