

AIRCRAFT GUN SIGHT

The Fixed Forward Gun Sight is a simple, robust optical collimator design optical sighting system, for use in tactical aircraft. Tracing its lineage to the Lynn Type 3 Aircraft Sight, the gun sight has been re-designed to incorporate updated and simplified optics, on-board controls, optimized electronics, and aircraft power-source provisions. We currently have mounting provisions for multiple types of aircraft; however, the Gun Sight is adaptable to many fixed-wing and rotary-wing platforms with Fixed Forward weapon systems.
